-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claims 1-8 are pending.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-8 are rejected under 35 U.S.C. 102(e) as being anticipated by US# 6,562,521 to Nistler et al.

3. Nistler teaches a photomask that includes a transparent substrate, a line patterning feature having ends formed on the transparent substrate, and an island patterning feature adjacent at least one of the ends of the line patterning feature. A method for fabricating a feature on a wafer includes providing a photomask. The photomask includes a transparent substrate, a line patterning feature having ends formed on the transparent substrate, and an island patterning feature adjacent at least one of the ends of the line patterning feature. A radiation source adapted to supply incident radiation is provided, and a wafer is exposed with the incident radiation through the photomask (Abstract). Figures 11 and 12 show the pattern having a line section and a reinforcing section that continues to the line section and that has a greater width than the width of the line section. Lines 205 can be photoresist lines (col. 6, lines 20-25). In

addition, it is inherent that a photoresist is patterned and developed in order to make the photoresist lines (col. 6, lines 40-55). Figures 6-8 show evaluating the substrate in a cross section perpendicular to the lengthwise direction of the line section to observe the cross section. Nistler also teaches using the pattern in a writing system (col. 6, lines 15-20).
